

## Advanced Arena™ The premium solution for dust control

### Apply and Ride Dust Control Fluid

*Reduces dust within indoor and outdoor equine riding arenas*

For decades, barn owners have been plagued by dusty arenas that can be harmful to both horses and riders. As horses are ridden, particles of sand and other organic material in footing becomes airborne, dust is created and dispersed. Evidence indicates that any footing surface, no matter the material, eventually causes air pollution with fungal spores and dust.

Although water and salt-based solutions provide temporary dust relief, they are not ideal long-term solutions. Watering is time intensive, hardens footing, freezes during winter months, and can create a breeding ground for insects. Salt-based products such as, magnesium chloride, will rust metal equipment and can lose effectiveness in dry seasons.

Advanced Arena™ was designed as the premium solution for top-performing arenas, offering long-lasting, instant dust reduction safely and quickly.

- Ride immediately after application
- Long-lasting, instant dust reduction
- Non-corrosive and will not rust metal
- Non-petroleum, non-salt-based
- Apply with standard water sprayers
- Safe for horses, pets, and people
- Provides a soft, consistent arena
- For sand-based footing

Advanced Arena™ Professional and Indoor formulations meet FDA requirements for incidental food contact under 21 CFR 178.3570.

*We have a formulation  
for your specific needs  
and budget.*
